IARUMS Wiki

An IARU Monitoring System Wiki has been published in the [IARUMS R1 page](#) to assist users in recognizing and identifying the most usual modes used by non-amateur radio stations in the HF amateur radio bands. It contains a discreet technical description for each mode, as well as audio recordings, waterfall screenshots, and video captures of the transmissions.

This Wiki will be updated as new signals will be received and processed, and as we get better screenshots / audio / video recordings of them.

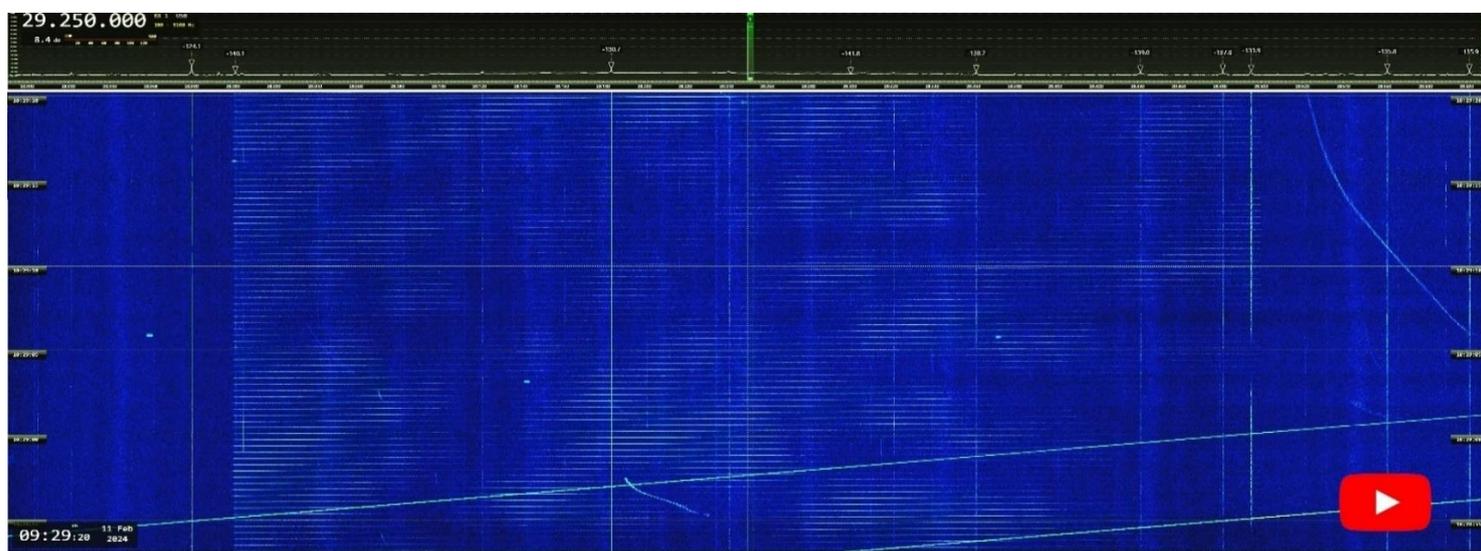

The IARUMS Wiki can be directly accessed via this link: <https://www.iaru-r1.org/spectrum/monitoring-system/iarums-wiki/>

New DARC IARUMS coordinator

Daniel, DL3RTL resigned as IARUMS DARC (Germany) coordinator. We thank him for the work done and for his help in IARUMS R1. We welcome Harald, DL9NDW as new DARC IARUMS coordinator and wish him success in this role.

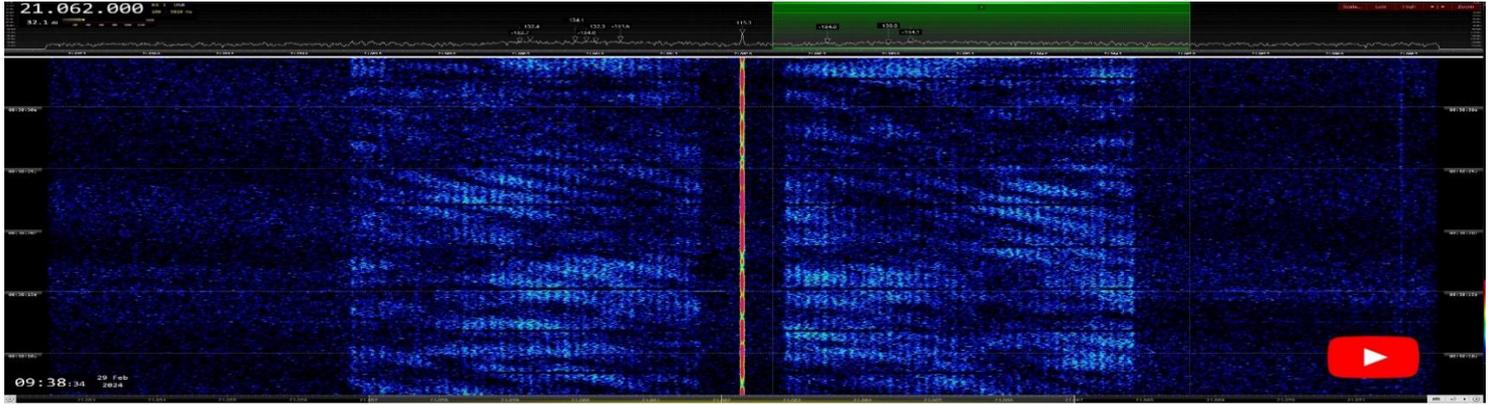

News and info

During February 2024, apart from the regrettably usual annoying non-amateur transmissions received in the HF bands allocated to the amateur radio, we received some unknown signals, like the following unknown radar. BW = 500 kHz!

February the 11th, 0929 UTC. 29250 kHz CF: Unknown radar. BW = 500 kHz. 2.73 sps. Long-lasting

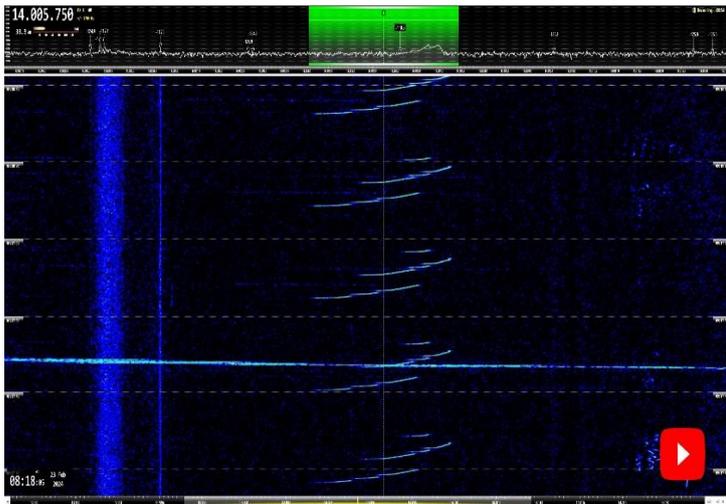

We also received an unknow signal on the 15 m band two times, with a central carrier (AM; A3E), sending bursts and operating bandwidth and signal changes:

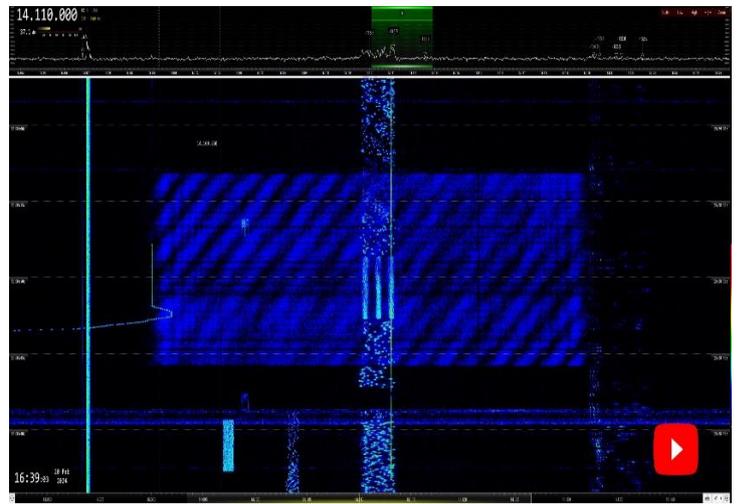

XXX. Unidentified signal. 21000 kHz CF on 03 FEB 2024, 0736 UTC and on 21062 kHz CF (screenshot) on 29 FEB 2024, 0838 UTC

Since February the 23th, unidentified burst (BD ca 3sec. BRI ca 3 sec) were daily observed until the end of the month on 14005.75 kHz CF and at the same time on 14258.5 kHz CF, both transmissions being long-lasting.

Unknown 20 kHz wide bursts (25 sps) were also observed on 20 m on February the 20th.

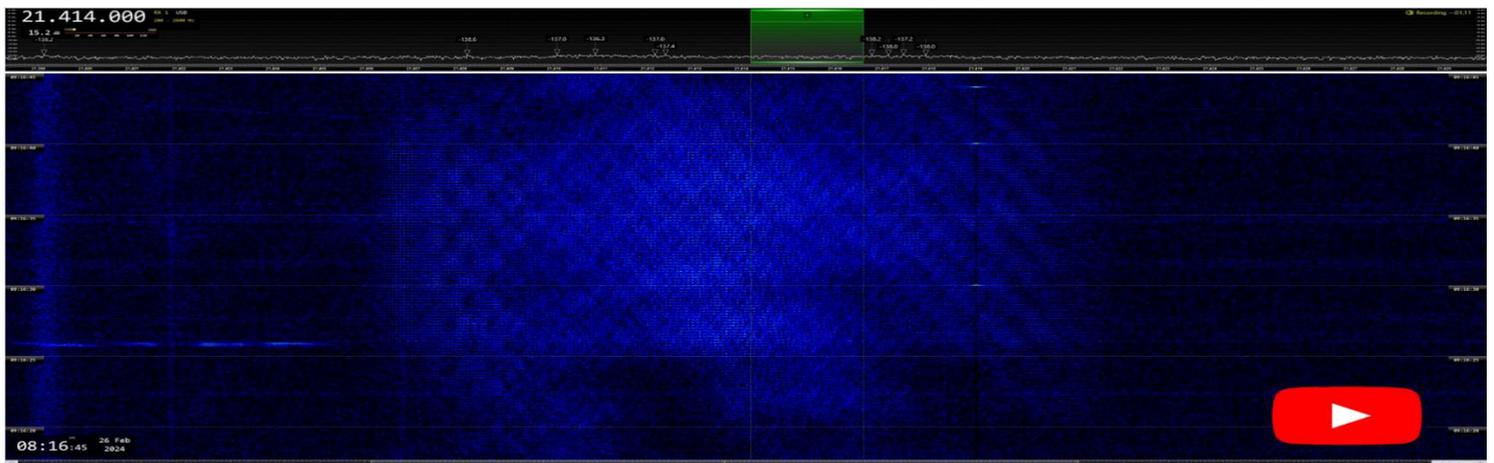

21005.75 kHz CF and 14258.5 kHz CF: Unidentified bursts. BW ca 3K40E.

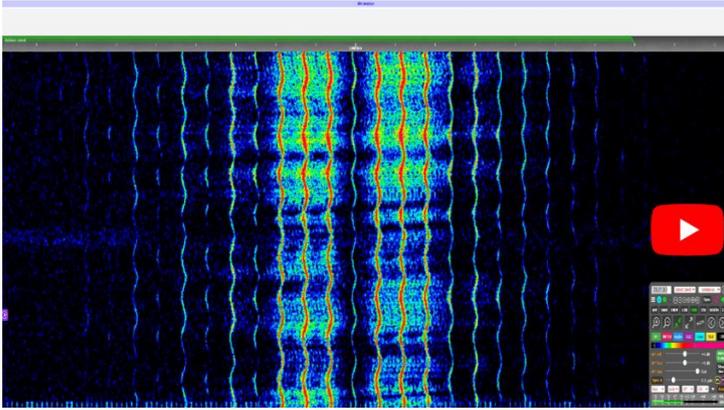

14110 kHz CF: XXX: Unidentified bursts. BW = 20K0E. 25 sps

We also observed an unknown weak signal on 21414 kHz CF (bandwidth ca 15 kHz) which was received daily during the morning UTC hours, and long-lasting:

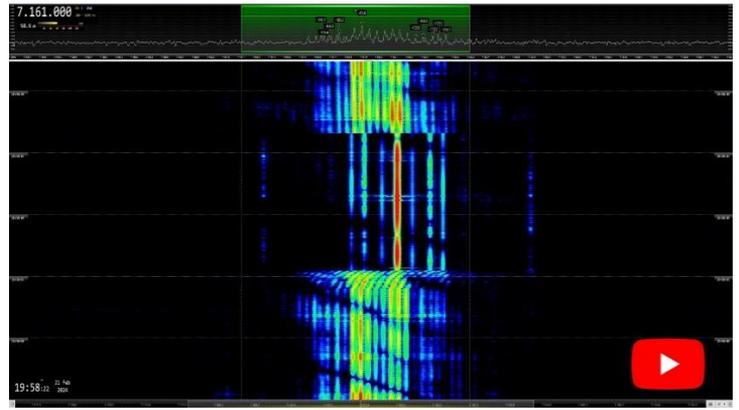

21414 kHz: XXX. Unidentified signal. BW ca 15 kHz. Daily during February 2024. Long-lasting. Weak and QSB.

Now speaking more of oddities than about unknown signals, we received two FSK (F1B) transmissions, one of them idling and unclean, and the other one, defective:

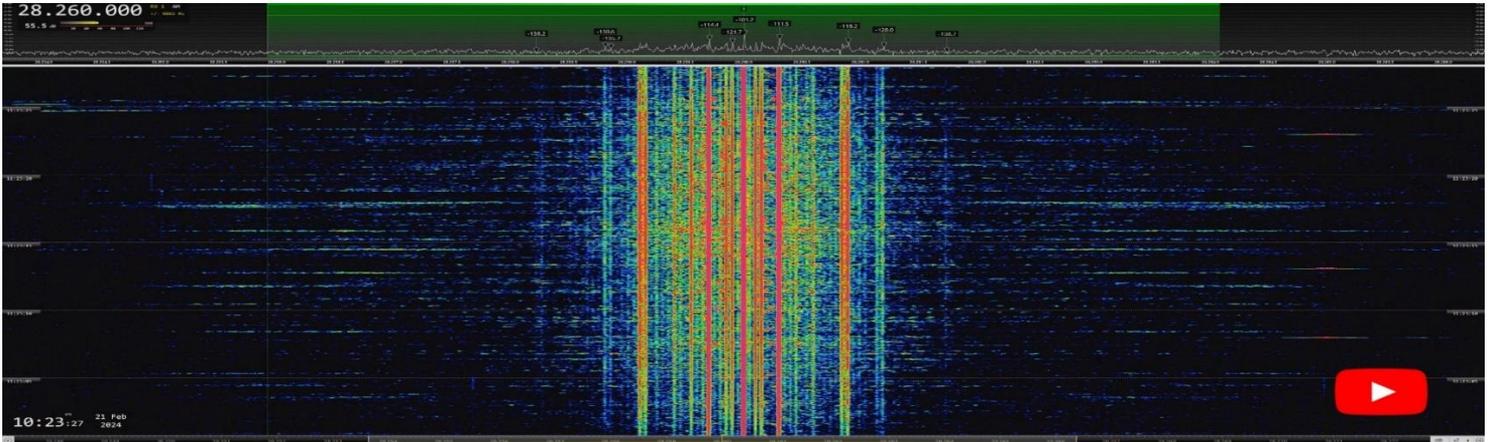

7008 kHz CF: F1B. Shift = 250 Hz. Idle. Unclean (Via KiwiSDR)

7162 kHz CF, F1B. RUS. Shift = 250 Hz. Defective system

Broadcasting

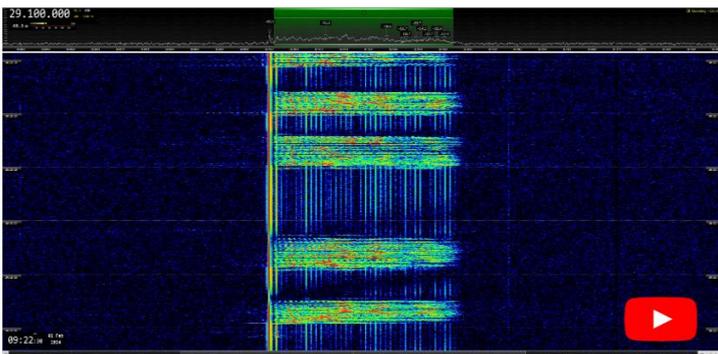

Daily observed from 1000 UTC to 1100 UTC, we received an harmonic of the station „Radio Free Asia“ (AM. A3E. BW = 9 kHz. CF QRG = 9420 kHz; transmitting from Tajikistan) on the 10 m band, on 9420 kHz kHz CF:

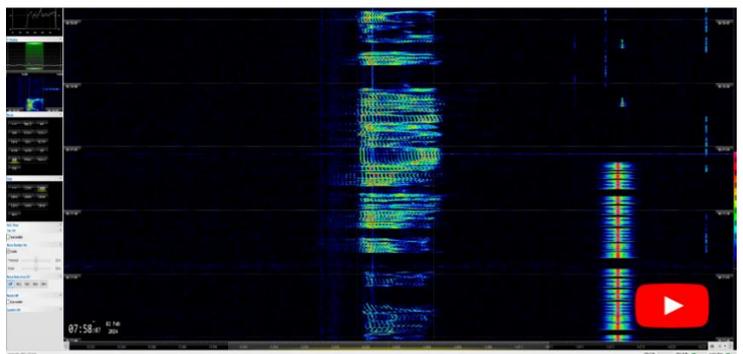

28260 kHz CF: AM. A3E. Harmonic of the broadcasting station „Radigo Free Asia“. TJK. (Main QRG: 9420 kHz CF). Daily, 1000 UTC to 1100 UTC

SSB

The longlasting carrier and the sporadic SSB (J3E-U) non-amateur – most probably, MIL – short transmissions were also received daily on 29100 kHz USB (BW = 3K20E) during February, like on the last months. We also often received the well known transmissions of a group of Spanish fishers, operating since many years on 21000 kHz USB (J3E-U), but also sometimes received on 14000 kHz USB:

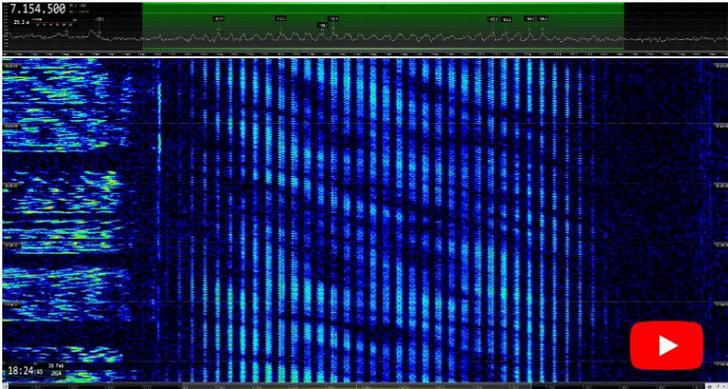

29100 kHz USB: Carrier + sporadic non-amateur short USB TX. Daily

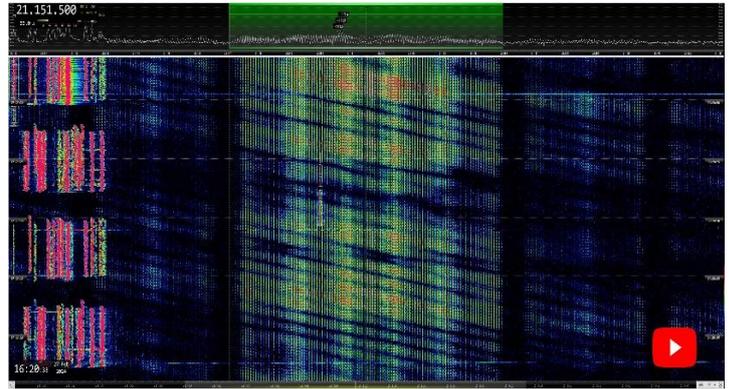

14000 kHz USB. Spanish fishers. Often

Jammers

This type of transmissions, more and more widely used in the electromagnetic warfare field, has unfortunately become much more frequent in our bands since the beginning of the war in Ukraine. We received almost daily one of them on 7156.5 kHz CF, and several times another one on 21151 kHz CF, both developed from a 85 Hz tone

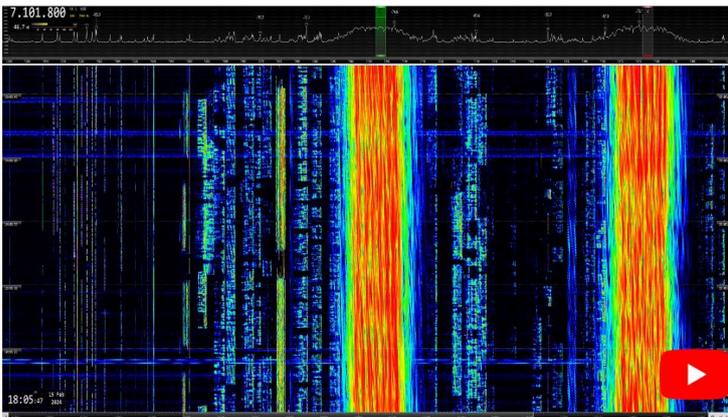

7156.5 kHz CF. XXX. Jammer. BW ca 2K50E. Almost daily

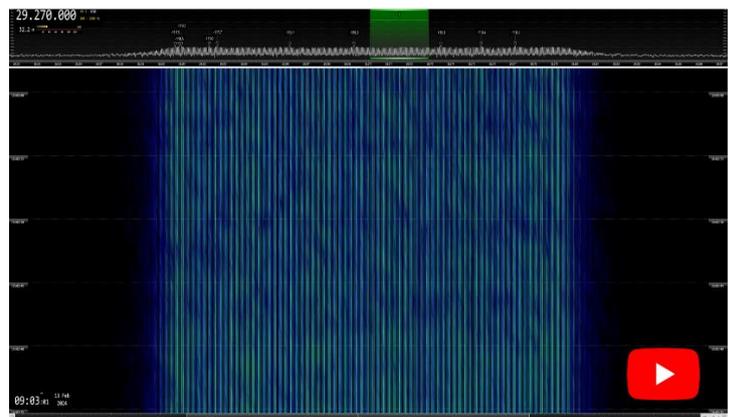

21151.5 kHz CF: XXX. Jammer. BW ca 10K0E. Often

Radars

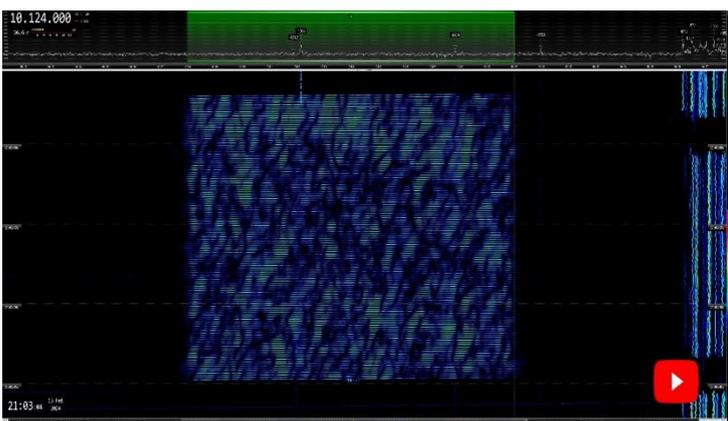

Due to their large amount, the large bandwidth they occupy, and to the huge power used in these transmissions, theirs are the most annoying non-amateur transmissions disturbing the HF amateur bands. Below, just a few samples of the different over the horizon radar's transmissions we received along February 2024:

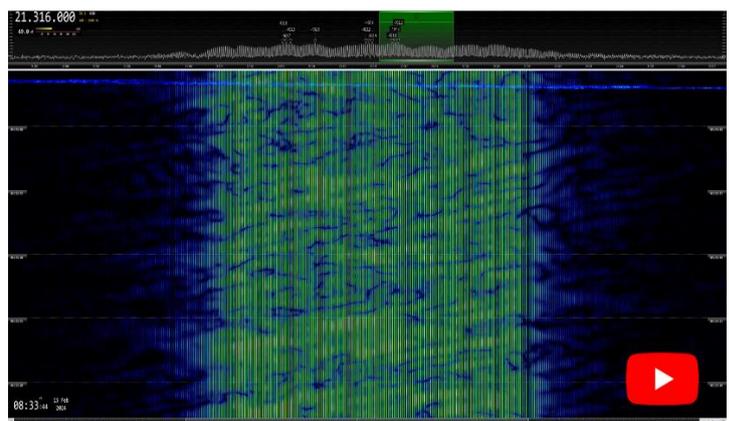

40 m band: 2 X OTHR Contayner. RUS. FMOP. BW = 12K0E. 40 sps

29270 kHz CF: OTHR. G (UK SBA; Cyprus). FMCW. BW = 20K0E. 50 sps

10124 kHz CF: OTHR JORN bursts. AUS. BW = 12K0E. 7.2 sps

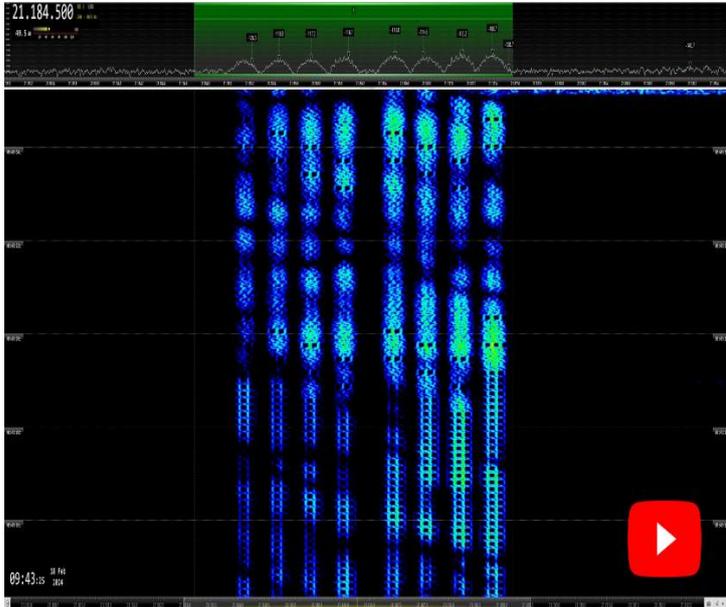

21316 kHz CF: CHN OTHR. FMCW. BW = 10K0E. 50 sps

We also observed many transmissions of the following radars:

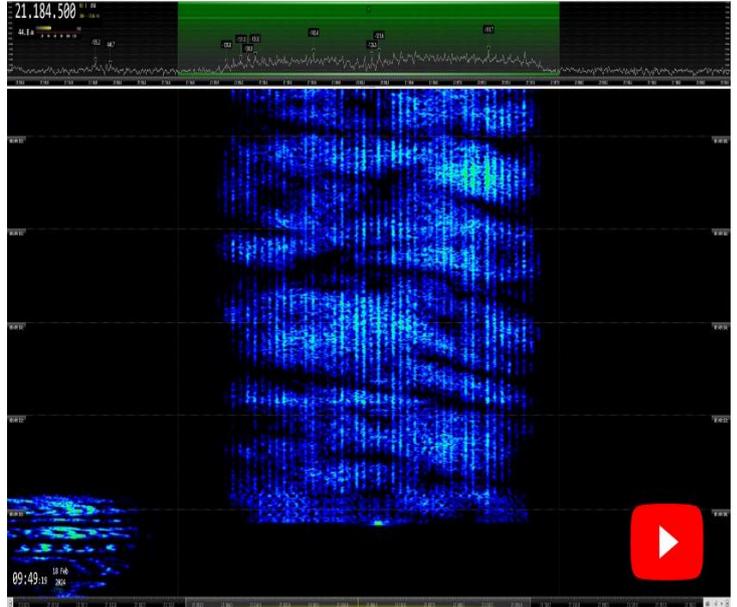

- CHN OTHR „Foghorn“. FMCW. BW = 10K0E. 41.7, 50, 66.7 or 83.3 sps short bursts. Daily (40 to 12m) 
- OTHR IRN: AMOP. BW ca 45K0E. Alternating 150 sps and 313 sps bursts. Almost daily (10m) 

MIL & GOV

Several transmissions using a CHN unidentified DQPSK modem (BW = 2K40E. Bd = 2400) were observed bening sent following CHN 4+4 transmissions (PSK. G7D. BW = 2K40E. 8 x 45 Bd) on the same CF QRG:

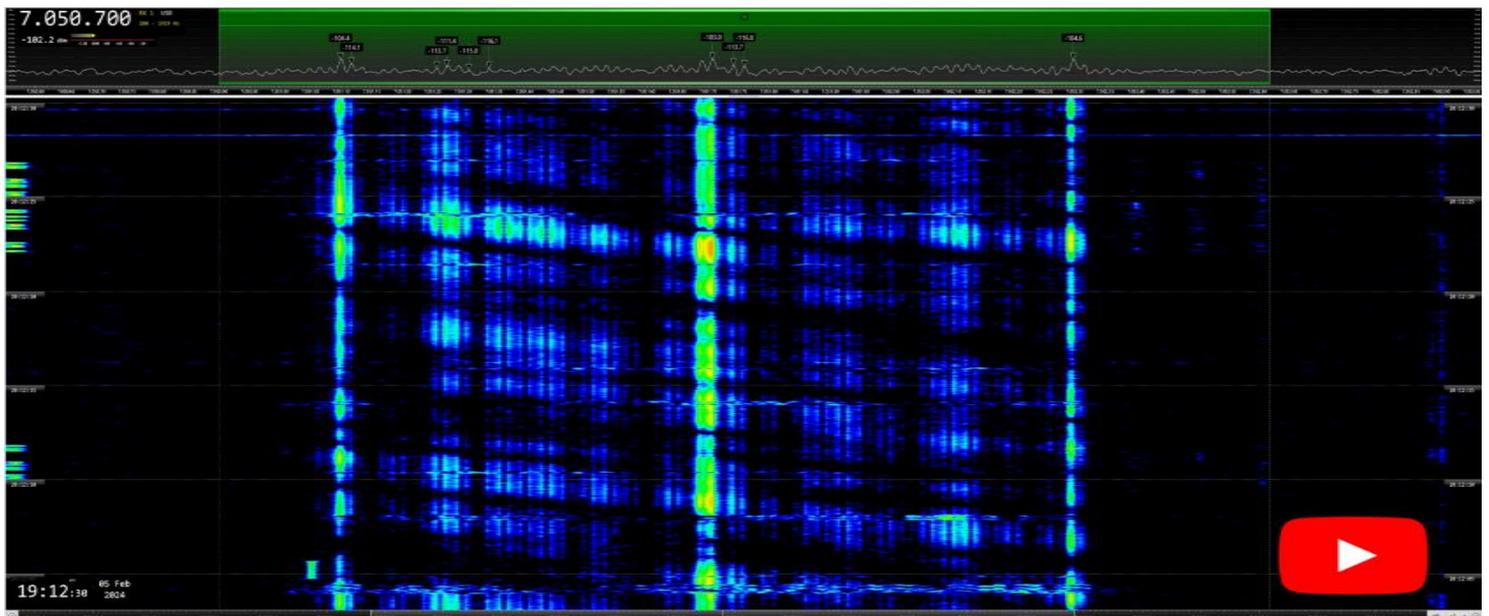

21184.5 kHz USB: CHN 4+4. G7D. BW = 2K40E. 8 x 75 Bd

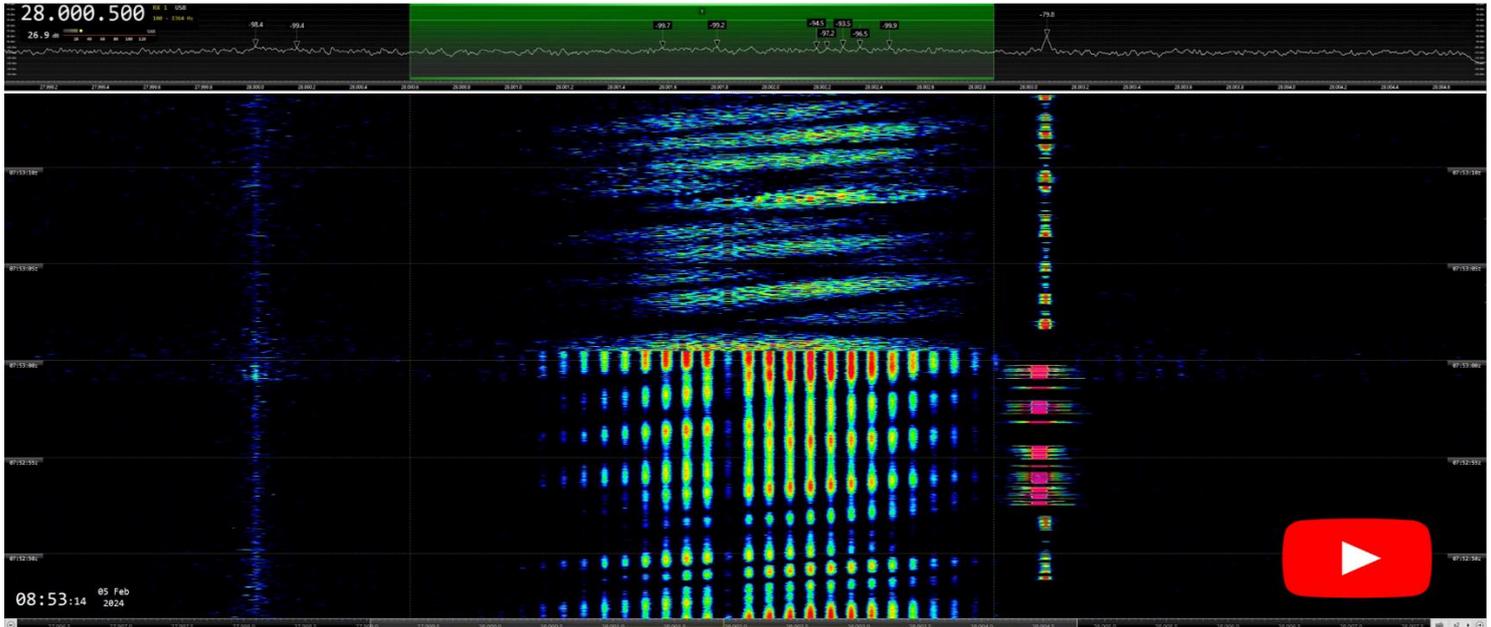

21184.5 kHz USB: Unid CHN modem. DQPSK. BW = 2K40E. 2400 Bd

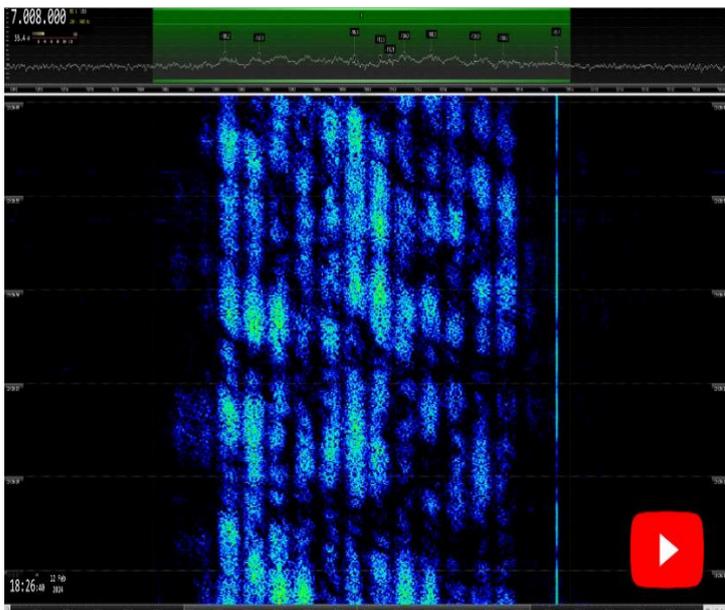

Russian Tactical Data Link long-lasting transmissions were heard almost daily on 7051.7 kHz CF. A T-230 (a.k.a. Mahovik) was received on 28001.8 kHz CF. CIS-12 transmissions were observed too, mostly on the 40m and 20 m bands. Some CIS-60 transmissions were also noted on the 20 m band:

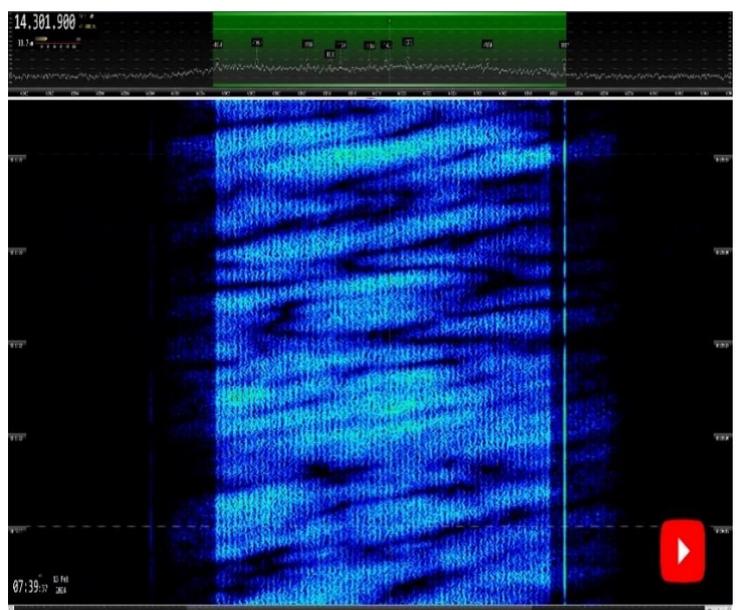

7051.7 kHz CF: RUS Tactical DATA LINK. PSK BW = 1K20E. 800 Bd

28002 kHz CFT-230, a.k.a Mahovik. PSK. BW = 1K20E. 1200 Bd

7010 kHz CF: CIS-12. J7D. BW = 2K70E. 12 x 120 Bd

14302 kHz CF: CIS-60. OFDM. W7D. BW = 2K80E. 60 x 30Bd

We also received transmissions sent on the following modes:

- DPRK-FSK 600 ARQ. F1D. Shift = 600 Hz. Bd = 600. Very often (20 and 15 m) 
- DPRK PSK 1200 ARQ. G1D. BW = 1K20E. 1200 Bd. Often. (20m) 
- Many CIS-## F1B (FSK) transmissions, using different shifts and baud rates. Daily. (40, 20 and 15 m) 
- CIS 36-50 F1B (FSK) and F1A (FSK telegraphy for aural reception). Shift = 200 Hz. 50 Bd. Often (40 m) 
- MIL-188-141A ALE. MFSK. J7D. BW = 1K80E. 8 x 125 Bd. Often (40m and 15m) 

- ***Find other screenshots and videos about the intrusions received during February at the end of this Newsletter*** -

Detailed reports of national coordinators

Abbreviations used (as per IARUMS definitions)

aka = also known as | **BC** = Broadcast | **Bd** = Baud | **BD** = Burst duration) | **BRI** = Burst repetition interval. **BW** = Bandwidth | **ca** = approximate | **CHN** = **PRC** = People’s Republic of China | **CF** = Center frequency **DF** = Direction finding (radio location; see also TDoA) | **FMCW** = frequency modulated continuous wave **FMOP** = frequency modulated on pulse | **OTHR** = over the horizon radar | **SH** = Shift (Hz) | **sps** = sweeps per second | **TDoA** = Time difference of arrival | **ui** = **unid** = unidentified.

IRTS; Michael, EI3GYB									
kHz	UTC	DD	MM	ITU	IDENT	MODE	BD /sps	SH / BW	DETAILS
6975	1930	29	2			RADAR			Radar from 6975 to 7005 kHz. Strong and persistent.
6985	1530	7	2			RADAR			Radar from 6985 to 7010 kHz.Huge and persistent.Also heard on the 19 th at the same time.
7010	2040	19	2	RUS		RADAR			7010 to 7060 kHz.“Sunflower”. Weak but persistent.
7055	1930	1	2	RUS-UKR		LSB			Russian- Ukrainian radio war. Heard nearly every day of the month at various times during the day.
7055	1810	1	2			RADAR			Radar from 7055 to 7075 kHz. Huge and persistent.
7085	2220	29	2			RADAR			Radar from 7085 to 7135 kHz. Huge and persistent.
7158	2030	23	2			Digital			Huge persistent signal. Unknown mode or origin. Persistent. Still audible at 2300z.
7193	1525	19	2			PSK			Strong and persistent.
14192	1100	1	2	RUS		F1B			RUS navy Kaliningrad. Daily all day long with a medium to strong signal.
18120	1045	29	2	CHN		RADAR			18120 to 18140 kHz. Short but strong bursts. Persistent. Ends around 1200z.
18138	1244	2	2	UK		RADAR			Radar from 18138 to 18180 kHz. Very strong and persistent.SBA on Cyprus. Also heard on the 3 rd at 1245z and 20 th at 1245z with a slight variation of the affected spectrum of the 18 MHz band.
21000	1405	19	2	E or MM		USB			Spanish sailors chatting. Medium signals. Heard on other days at various times as well.
21295	945	28	2	G		RADAR			Radar from 21295 to 21315 kHz. Very strong and persistent.UK SBA in Cyprus.
21350	1445	27	2	G		RADAR			Radar from 21350 to 21380 kHz. Very Strong and persistent. UK SBA in Cyprus.
21438	1245	10	2	UKR		CW			RUS navy Sevastopol. Daily all day long with a medium to strong signal.
24953	1015	16	2	G		RADAR			Radar from 24953 to 24973 kHz. Strong and persistent. UK SBA in Cyprus.
28568	925	23	2	G		RADAR			Radar from 28568 to 28588 kHz. Strong and persistent. UK SBA in Cyprus
28650	1420	5	2			FM			Carrier. Persistent and strong.Also heard on the 8 th at 1500z.
28745	1255	2	2	G		RADAR			Radar from 28745 to 28765 kHz. UK SBA in Cyprus
28830	1330	19	2	IRN		RADAR			Radar from 28830 to 28900 kHz. Strong and persistent.Heard on many days at various

21213 kHz USB: RACAL Panther H handshake. The RACAL Panther H is an intelligent frequency hopping transceiver (10 hops per second) used for MIL communications. This signal can be heard on most of the HF amateur radio bands, daily, since many years.

21062 kHz CF: XXX. Unidentified continuous signal, with center carrier (AM). Different BW and signal changes occurred during the TX. The signal very similar to the one received on 21000 kHz CF on February the 02th, 0736 UTC

28358 kHz CF. Rare transmission of the British OTHR located in the UK Sovereign Base Are in Cyprus. BW = 20K0E. 50 sps. This radar always transmit in center frequencies ending on 0 or on 5 (i.e.: 28355 kHz CF or 28360 kHz CF). In this unique case, the CF QRG theis not ending on 5 or 0.

7200 kHz CF:LINK 11 DSB. Partially inside the 40m band. BD7. BW = 6K0. 75 Bd. Weak & QSB
