Part 1: News and Infos

1. Thunderstorms spoiled observations

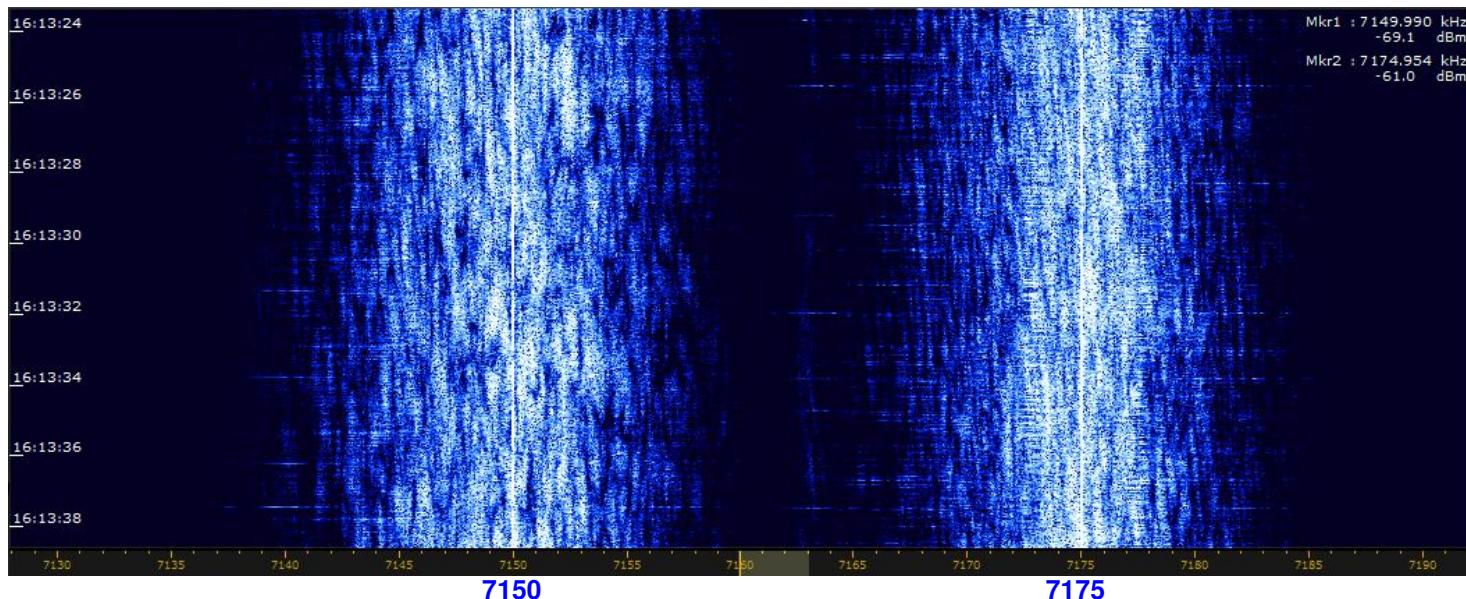

Due to many electrical discharges by thunderstorms (QRN) the intruder investigation on all bands was rather difficult and sometimes impossible. Especially the lower bands were concerned.

The screenshot below shows the situation on 5350 kHz on July 30th at 1407 UTC. Screenshot: DK2OM

2. Radio Eritrea and QRM by Radio Ethiopia on 7 MHz

The hostile brothers were daily active on 7150 and 7175 kHz. Earlier complaints were not regarded. No change. Screenshot: DK2OM on July 7th at 1613 UTC

3. HAMRADIO 2017 – Monitoring Meeting DARC and IARUMS Region 1

About 100 Hams visited our meeting. Even our friend Ralph from Philippines came to our meeting as every year.

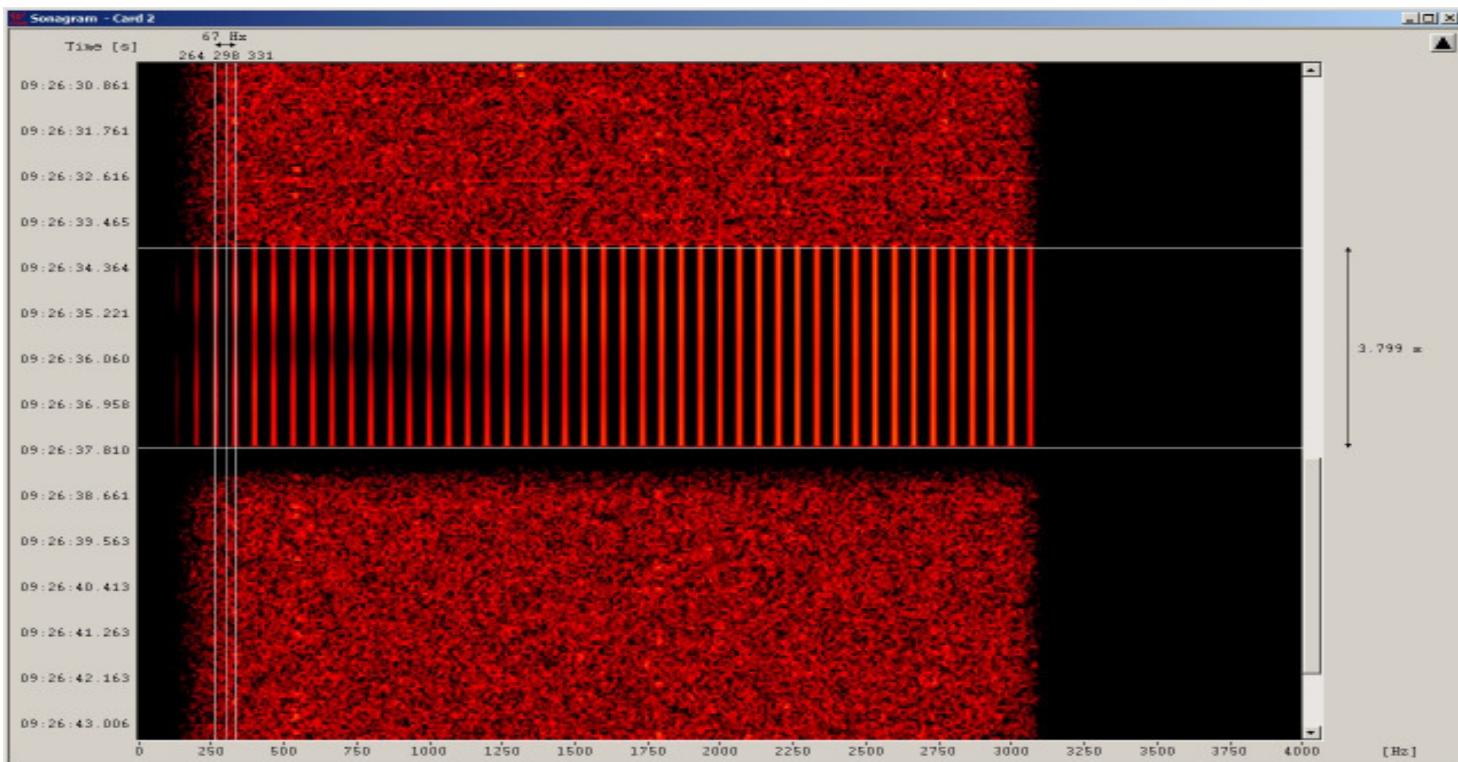

Prof.Dr. Wolfgang Skupin gave an excellent presentation about "Wireless navigation systems on 9 kHz - 30 MHz".

Photo: DK2OM

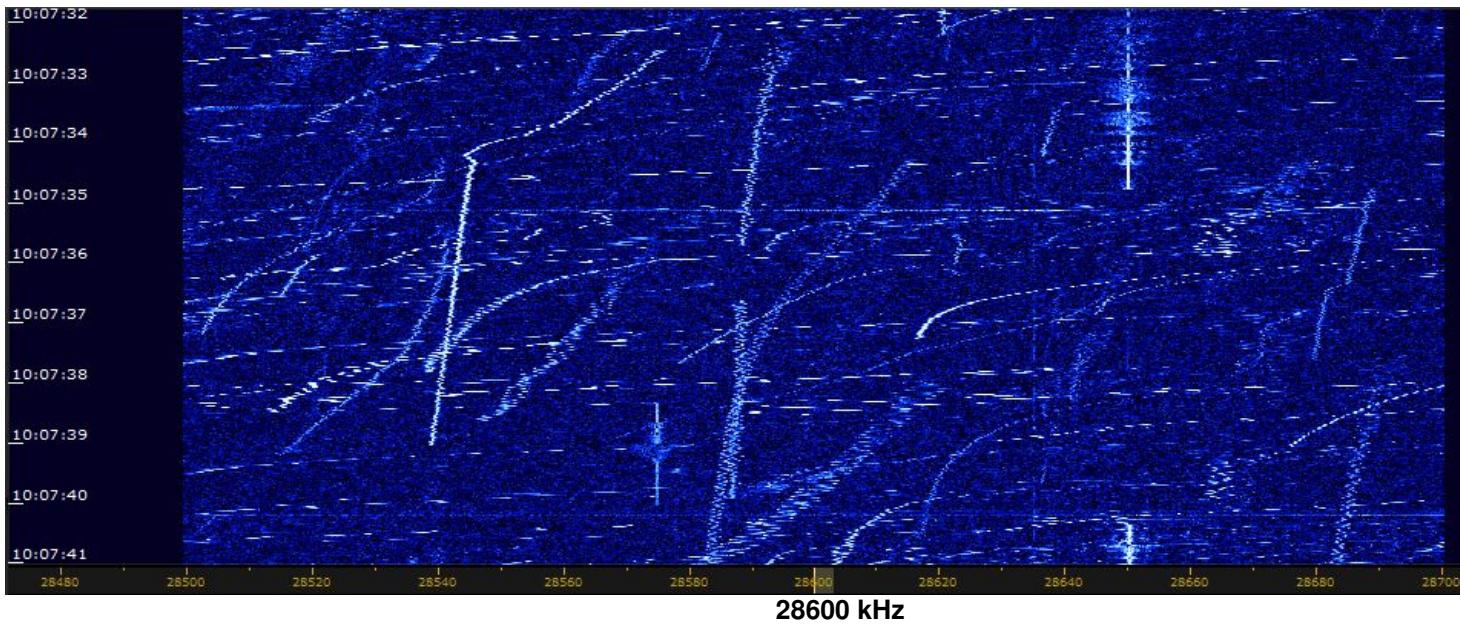

4. Measuring the duration of an OTH radar burst

Measuring the duration of a radar burst is an easy job with Wavecom W-Code. The difference between the horizontal lines shows the duration of the burst, 3.799 sec. The signal below is a Chinese foghorn burst with 66.66 sps (PRF 66.66) on 21308 kHz on July 25th at 0926 UTC. Screenshot: DK2OM with W-Code

5. Downchirps from OTH radars in Region 3

You can see many downchirps on 28 MHz in Region 3 on my next screenshot. July 25th via remote.

6. Miscellaneous or bad news:

7120.0 kHz – Radio Hargaysa Somalia – as usual

7150.0 kHz and 7175 kHz – Radio Eritrea and white noise QRM by Radio Ethiopia

14295.0 kHz - Radio Tajik (harmonic from 4765 kHz) – no change

18080.0 kHz – Sound of Hope - Taiwan

21438.0 kHz – Russian Navy Sevastopol on A1A - as usual
